Accra-Ghana

Dear Sir,

APPLICATION FOR INTERNSHIP PROGRAM

I am OWUSU DESMOND, a second year Chemical Engineering student and I am interested in applying for the **TULLOW GHANA INTERNSHIP PROGRAM 2016**.

I started off being interested in Engineering but after getting exposed to some finance workshops I realized that I was much more interested in pursuing business because I want to make an impact and work in something much faster-paced. Since then, I've done some research on my own and I've realized that starting Early internship and gaining skill will be best fit of me. With the intensive analytical discipline received in engineering I believe my skills will enable me transition well into the internship program. Partaking in this program will serve as a powerful diving board in furthering my interest.

I have excellent quantitative skills and my attention to detail is impeccable. I am also knowledgeable in basic programming Mat Lab, AutoCAD usage and general Information Technology. My various academic projects have allowed me to develop excellent teamwork, communication and problem-solving skills, which I understand would be valuable in this program. I believe that I would be an asset to your program. This would provide me with the ideal opportunity to learn from your organizations experience and to expand my skills in the Chemical Engineering field.

I hope that my qualifications are a match for this program. If so I look forward to hearing from you. Thank you for your consideration.

Sincerely,
OWUSU DESMOND.
