

b) STEADY FLOW, NO ACCEL OF C.V.

NOTES: a) BY SYMMETRY PRESSURE FORCES ON UPPER AND LOWER STREAMSURFACES WILL BALLINGE ... ONLY NEED TO CONSIDER PRESSURE FORCES ON LEFT AND RIGHT SURFACES OF C.V.

> b) SINCE UPPER AND LOWER SURFACES ARE STREAMLINES (EVERYWHERE PARALLEL TO FLOW) THERE U NO FLUX ACROSS THEM. NEED ONLY CONSIDER FLUX TERMS ON LEFT AND RIGHT SURFACES OF C.V.

MASS FLOW THROUGH
SURFACE AT (a) = g Va COSBaS

MUST BE EQUAL
SURFACE AT (b) = g Vb COSBbS

FLUXES IN OR
OUT OF C.V.

or blade is pirection

No y-force on left > right surfaces & pressures on top & bottom surfaces are equal

.. FORCE ON BLADE IS IN + Y-DIRECTION
